The Tracker Data Warehouse is a Web based reporting engine which uses the SQL Server as a back-end data store. The Tracker Data Warehouse provides users with simple, fast access to the bottom line of their business efforts and management.

The Tracker Data Warehouse gathers data from all of the Tracker databases for projects, customers, time and expense reporting, purchasing and HR, as well as legacy HR and accounting systems. It compiles this data into reports which users can manipulate dynamically through filters, pivot tables and drag-and-drop functions, as well as export them to Microsoft Excel. Reports can also be viewed in printable versions, for publication from the browser. The Tracker Data Warehouse integrates with Crystal Reports, and supports the export of Crystal Reports as PDF and Microsoft Word documents.

With over 40 report templates, a report editor to create customized reports and the capability to integrate with Crystal Reports, the Tracker Data Warehouse offers a comprehensive reporting and decision support system.
